TECHNICAL SUPPLEMENT
FOR MICROPROSE CD ROM TITLES

TECHNICAL REQUIREMENTS

All MicroProse CD ROM titles require the following: DOS 5.0 or higher, a hard drive, a CD ROM drive, the Microsoft CD ROM Extension (MSCDEX) version 2.1 or higher, 2 MB of Expanded RAM, and a VGA Graphics Card. Each product will call for different hardware configurations. Reference the box label for specific hardware details. Enhanced CD ROM titles such as F-14 Fleet Defender and BloodNet may require a Sound Blaster compatible sound card for certain game features.

INSTALLATION

The installation of MicroProse CD products is very simple. Just follow the instructions below, and you'll soon be playing one of the coolest games known to mankind.

- Turn on your computer, making sure that the Microsoft CD ROM Extension is loaded.
- Place the CD in the CD ROM drive.
- Make that drive the current drive. (Type the letter of that drive [usually **D**], followed by a colon, then press **[Enter]**.)
- Type the word INSTALL and press **[Enter]**.
- Follow the on-screen instructions.

Several MicroProse titles will copy files to your hard drive. These are only the files that are absolutely necessary to play the game and take up a minimum amount of hard disk space. Some MicroProse CD titles, such as World Circuit, will allow you to decide how many files you want the installation program to copy to your hard drive.

Many MicroProse CD ROM products will temporarily use expanded memory and hard disk space to cache information. This "caching" process will take a few moments but will allow scenes to play much faster and will enhance your gaming experience.

RUNNING THE GAMES

After the installation is complete, the install program will instruct you how to start each game or game pack. Simply repeat those instructions each time you wish to replay the game.

TECHNICAL ASSISTANCE

For customer service and technical support, call MicroProse at 410-771-1151 between 9:00 a.m. and 5:00 p.m. Eastern Standard Time, Monday through Friday.
